

**Science Matters:** Contact Wendy VARLEY.

Meetings: 14:30-16:00 4<sup>th</sup> Friday at the Tesco

This group started as a "find out for yourself" science group using old Open University courses from the Internet and meeting once a month to talk about what we had learnt and hopefully get answers to any problems we had come across. We no longer stick just to O.U. material but use all sources of information to find out about a topic chosen by the group e.g. Artificial Intelligence; How can we feed the fast growing World population?, Climate change; Heredity and Intelligence. Occasionally one of the group talks to us about something they are particularly interested in. Our meetings are varied but always stimulating and I would like to thank all members of the group for helping to keep my brain alive and (almost) functioning!
